

Nội Bài International Airport

Phú Minh, Sóc Sơn, Hà Nội, Vietnam

Industry: AIRPORT

End User:

Nội Bài International Airport is the largest airport in the north of the country. It is the main airport serving Hanoi. The airport consists of two passenger terminals. Terminal 1 serves the domestic flights and the newly built Terminal 2 serves all international flights to and from Hanoi. The airport is currently the main hub of the country's flag carrier Vietnam Airlines as well as a major hub of other low cost carriers.

The airport served a total of 13 million passengers in 2013 despite having a capacity of only 9 million at the time. The new international terminal had its first commercial flight on the 25th of December 2014 and went into full operation a week later. The total capacity of the airport has been boosted to 19 million passengers per year and is growing.

Business Objective:

Traffic movement through Nội Bài International Airport has increased strongly in recent years, because of this trend (ACV) Airport Corporation of Vietnam has requested that the new International Terminal (T2) will provide better services with a more modern travel experience to its passengers, while facilitating airport personnel with a complete secure access control in entry and exit ways. Efficiency is what the airport is seeking in order to run their operations smoothly.

Solution:

To address the complete solution, TNT Technologies had to create a new structural wiring platform in the necessary areas where specified access points were going to be installed.

Security is a highly realized threat at entry and exit ways of the airport. Providing this sensitive system to ACV, experienced engineers mapped out a sophisticated installation plan to deliver the solution efficiently by being able to program multiple keypad readers which granted access to airport personnel where needed. HID keypad readers provide users with enhanced secure interaction at the door.

(Nội Bài International Airport - Hanoi)

310 Sets - HID Secured Contactless Smart Card Keypad Reader

Reader is flexible, highly secure, dual-technology, stylish, and designed for a wide variety of applications.

Result:

The provided access control system was designed to guarantee a flexible, effective secure management. The systems facilitate access of personnel, passengers, and watch over movements of freight and employees.

Life time warranty from HID warranting that the hardware products will be free from material defects.
